

# Cool-Weld

## Heat Barrier Spray

### COOLWELD-32

Cool-Weld™ is a spray on gel heat shield for soldering, sweating and welding. Ideal for use on filter driers, pipes, valves, sheet metal, etc. Can be used on porous surfaces such as fabrics or drywall. As long as there is some Cool-Weld™ present the surface will resist charring.

- **Eliminates heat transfer to surrounding areas**
- **Wets and completely protects sensitive areas**
- **Safe, non-toxic and non-corrosive**
- **Odorless and non-staining**

**INSTRUCTIONS:** Shake bottle well before use. Spray Cool-Weld™ directly onto the surface to be shielded and protected. Use enough spray to completely cover the surface and reapply Cool-Weld™ throughout the welding process as needed.

**CAUTION:** Always use extreme care when using any torch especially in confined spaces. Never leave a torch unattended. Plan your work in advance and think about what else can burn in the work area. Plan to have a fire extinguisher available before starting work. Welding and soldering should be performed in a well ventilated area. Avoid breathing spray mist or contact with eyes. Eye contact may result in minor irritation. In case of eye contact, rinse eyes with cool fresh water.

Material Safety Data Sheet available for professional user on request.
